Baxter Healthcare Corporation's BioPharma Solutions business offers proprietary technologies and contract manufacturing services for parenteral drug delivery. The company has partnered with more than 250 clients, working with the top 10 pharmaceutical companies and 4 of the 5 top biopharmaceutical companies. From quality-driven processes to proven problem-solving strategies, we focus on maximizing your cost efficiency and delivering solutions for improved ASP and market share—and accelerated potential for growth.

Baxter's BioPharma Solutions offers you the right tools to:

- **Solve** scientific and formulation challenges from development to commercialization
- **Grow** your molecule's market presence with innovative solutions and expertise
- **Optimize** your efficiency and supply through state-of-the-art manufacturing

As a leader in parenteral manufacturing, Baxter provides proprietary technologies and contract services that include:

Contract Manufacturing

Baxter offers state-of-the-art clinical and commercial scale manufacturing including formulation, syringe/vial/cartridge filling, and lyophilization for small molecules, protein/peptides, cytotoxics, and vaccines. Much of our technology is designed to meet the unique needs of biologics. Our support begins with formulation and development expertise at the early clinical stage and continues all the way through manufacturing scale-up, supporting full commercialization at the time of launch and beyond. Our experienced project management team members have proven expertise in managing drugs and systems throughout the development cycle to help drive your product to market faster.

Enhanced Packaging

Whether your compound is new or firmly established, packaging is an essential ingredient in both clinical and market success. Baxter's portfolio of proprietary packaging solutions has helped some of the world's leading pharma and biotechnology customers create unique advantages even in crowded drug classes—and build long-lasting market differentiation. Our extensive portfolio includes: Liquid Premix Systems, GALAXY Frozen Premix Systems, SOLOMIX Ready-to-Use Admixture Systems, and CLEARSHOT Copolymer Prefilled Syringes.

Formulation Technology

PROMAXX microsphere technology offers narrow control of microsphere size and provides multiple options for solving difficult drug delivery problems. PROMAXX microspheres can be manufactured to meet formulation requirements for proteins including monoclonal antibodies and peptides, as well as low molecular weight drugs and nucleic acids including siRNA. High-load, high-yield formulations may provide the potential to develop safe, efficacious, and competitive therapeutic products across a wide range of drug classes, drug release profiles, and administration routes.

Outsource with confidence—Baxter's versatile, worldwide manufacturing resources give you the assurance you need to meet market demand. Manufacturing quality and operational excellence are ingrained in our culture. Several of Baxter's manufacturing facilities have been awarded the Shingo Prize for Excellence in Manufacturing, most recently in 2008 (Cartago, Costa Rica). Our versatile Bloomington, Indiana (USA) facility was recognized as a Facility of the Year in 2006.

At Baxter, we work with you to find just the right solution for you and your product. Whether your molecule is in the early stages of development or nearing patent expiry, rely on Baxter for the competitive edge you need.
