Brinkmann Instruments, Inc.

Precision instruments and expert support for your applications.

Labs throughout North America know us by name and our instruments by reputation. That's because we partner with only the best, world-renown instrument manufacturers to provide the tools you need to perform your work fast and right—the first time, every time. And we back them with a support system that includes local Product Specialists, an in-house Applications Lab to troubleshoot and help develop methods as well as manufacturer-trained Service Professionals—all of them committed to keeping your lab operating at its best. Our portfolio of products answers the needs of research and testing laboratories across all industries and applications.

They include:

- Metrohm® titrators, pH/Ion meters, specialty electrodes, automated sample prep systems and oxidative stability instrumentation
- Heidolph® rotary evaporators, pumps, shakers, stirrers and more
- Lauda® chillers, circulators and baths for temperature control
- KINEMATICA POLYTRONs® for efficient homogenization of samples
- Radleys® multiexperiment mixing and stirring benchtop workstations
- Seward Stomacher® paddle blenders and bags as well as centrifuges
- AirClean® benchtop fume enclosures
- Tuttnauer® autoclaves for maximum sterilization benefits
- VELP Scientifica® instruments for Kjeldahl, soxhlet extraction and fiber determinations
- Yamato® aqueous and organic spray dryers
- Eco Chemie voltammetric measuring devices

At R&D, QA/QC and independent testing labs everywhere, you'll find our Metrohm titration systems automating routine sample prep and sample analyses. You'll also find our POLYTRON homogenizers breaking down samples fast, Seward Stomachers churning away at some hard-to-blend sample and, especially in food/feed testing environments, Rancimats measuring oxidative stability and anti-oxidant effectiveness. Newest to Brinkmann, you'll now find our VELP Scientifica line of digesters and extractors for Kjeldahl, fiber analysis and fat determination. For fast and efficient sterilization, lab-favorite Tuttnauer autoclaves can be seen in a range of sizes and styles to meet exact requirements.

Our Heidolph evaporation and distillation systems, AirClean fume enclosures, Yamato spray dryers and Lauda temperature control platforms play big parts in the analytical landscapes described above; they're also standout equipment for all phases of drug discovery and development. From basic compound synthesis and reactor chemistries to precise production of dry solids to purification and scale-up/pilot plant applications, we've got the instruments you need and the expertise to support you and your work.

However big or small your lab size or sample size may be, your work will benefit from our range of simple, stand-alone devices to automated systems and at-line process analysis equipment. And our support teams—from the Brinkmann

Specialist who helps you put together the perfect platform for your work methods, to the Brinkmann chemists answering your application hotline call, to the Brinkmann service technician providing your routine maintenance—all of them are ready to serve you. Our goal? To give you the tools and support you

need, when you need it, so you can do your work quickly, easily and with complete confidence in your results.

Now, when you see our "Backed by Brinkmann" logo, you'll know exactly what we mean.
