Glatt Pharmaceutical Services is backed by the stability and reputation of Glatt Air Techniques, Inc., the pharmaceutical industry leader with a focus on oral solid dosage processing. The Glatt organization has a track record of over fifty years of successful innovation and experience. With our cGMP compliant and FDA registered and inspected manufacturing and R&D facilities in Ramsey, NJ; Binzen and Dresden, Germany; and our R&D facility in Reinach, Switzerland, our sites and staff are strategically structured to provide the specific development and manufacturing assets required to successfully support your oral solid dosage products.

Glatt Pharmaceutical Services Core Competencies:

Development Activities

- Solid Dosage Forms
- Difficult to produce Modified Release & Immediate Release Products
- Multi-particulate Systems
- Analytical Development
- Pre-formulation
- Formulation Development
- Process Development
- Feasibility Studies
- Organic Solvent Processing
- DEA Schedule II - V

Drug Delivery Technologies

- CPS Technology™ - Controlled Release Pellet System
 - Narrow particle size distribution
 - Perfect surface for modified release coating application
 - Ideal for ODT applications
- Glatt Wurster HS™ - Fluid Bed Coating and Pelletizing System
 - World renowned as the preferred system to provide modified release characteristics to particles and pellets and to create drug layered pellets
 - Robust, reproducible and scalable process
 - High yields and efficiencies

cGMP Contract Manufacturing

- Global cGMP Production sites
- Pilot Scale and Commercial Scale Wurster HS Systems
- Pelletizing & Modified Release Coating
- Pilot Scale and Commercial Scale Granulating, Drying, Coating & Blending
- Tablet Compression and Capsule Filling
- Organic Solvent Processing
- DEA Schedule II - V

Do you always learn enough about your product during the formulation and process development and scale up steps? Glatt Pharmaceutical Services' expertise in this area will help improve the effectiveness and efficiency of your development and scale up activities. We will make sure you identify and understand the critical process variables and critical steps that might influence the commercial success of your product.

- Identify formulation and raw material problems
- Resolve process inefficiencies and make your process commercially viable
- Improve reproducibility
- Process with the latest innovations in granulation and Wurster processing
- Improve yields

We just completed a major renovation and added significant development and cGMP capacity in 2007. We are very interested in exploring long term partnerships for development and cGMP commercial processing activities.
