WellSpring Pharmaceutical is a full-service provider of contract clinical and commercial manufacturing and packaging solutions for virtually all finished non-sterile solid and semi-solid dosage form products, including tablets, capsules, creams, lotions, ointments, gels and oral suspensions and solutions. We provide clinical manufacturing, over-encapsulation, labeling, packaging, storage, distribution and returned goods management to support our clients' most complex clinical trial requirements, from a local Phase I study to an international Phase IV study.

Centrally located, our capabilities include blending, fluid bed granulation, tablet compression, encapsulation, film coating, and topicals and liquids processing to accommodate requirements of any size. Extensive packaging capabilities

enable tablets or capsules to be bottled or blister-sealed in virtually any quantity or presentation. Liquids, creams or ointments can be supplied in varying sizes of bottles, jars, tubes and enema formats. WellSpring's Quality Services team provides full analytical, microbiological and quality assurance expertise to ensure full regulatory compliance. Our facility and quality systems have been successfully inspected by Health Canada and the FDA and meet current cGMP requirements.

At WellSpring, we've worked hard to build a pharmaceutical company that stands out from the crowd. Our overarching commitment to taking care of even the smallest details has led to several of our biggest achievements, most notably our ability to build productive global partnerships by perfectly complementing the operations of a growing roster of clients.
